# The Lungs

How does oxygen get into the \_\_\_\_\_<sup>Noun</sup>? When we \_\_\_\_\_<sup>Adjective</sup> or inhale air through our \_\_\_\_\_<sup>Noun</sup> or nose it \_\_\_\_\_<sup>Verb</sup> down a long \_\_\_\_\_<sup>Noun</sup> in the throat called the trachea. Once inside the \_\_\_\_\_<sup>Location</sup> the trachea divides into \_\_\_\_\_<sup>Number</sup> tubes called the bronchial tubes. Inside the lungs the tubes divide like the branches of a \_\_\_\_\_<sup>Noun</sup>. Here is where \_\_\_\_\_<sup>Noun</sup> cells pick up their supply of oxygen and drop off carbon dioxide waste, which the \_\_\_\_\_<sup>Noun</sup> will not use.
