Gravity

Gravity is a basic _____^{Noun} in the universe that attracts all _____^{Noun - Plural} to each other. You stay on the _____^{Noun} because of the attraction between your _____^{Noun} and the _____^{Location}. As _____^{Noun} objects get further apart, the _____^{Adjective} force between them gets smaller. It never gets to zero; it just gets too small to matter. This is why astronauts seem to be _____^{Adjective} in space. They are not _____^{Number}; they are simply _____^{Verb - Present ends in ING} AROUND the earth. Because the amount of gravity depends on your _____^{Noun}, your weight is _____^{Adjective} depending on how far away you are from _____^{Location}.
