# Gravity

Gravity is a basic \_\_\_\_\_<sup>Noun</sup> in the universe that attracts all \_\_\_\_\_<sup>Noun - Plural</sup> to each other. You stay on the \_\_\_\_\_<sup>Noun</sup> because of the attraction between your \_\_\_\_\_<sup>Noun</sup> and the \_\_\_\_\_<sup>Location</sup>. As \_\_\_\_\_<sup>Noun</sup> objects get further apart, the \_\_\_\_\_<sup>Adjective</sup> force between them gets smaller. It never gets to zero; it just gets too small to matter. This is why astronauts seem to be \_\_\_\_\_<sup>Adjective</sup> in space. They are not \_\_\_\_\_<sup>Number</sup>; they are simply \_\_\_\_\_<sup>Verb - Present ends in ING</sup> AROUND the earth. Because the amount of gravity depends on your \_\_\_\_\_<sup>Noun</sup>, your weight is \_\_\_\_\_<sup>Adjective</sup> depending on how far away you are from \_\_\_\_\_<sup>Location</sup>.
