Rock Song Remix

Rock Song (Remix)

I got some coal its a _____ Adjective _____ of rock. A solid with _____ Adjective _____ different types. Igneous, metamorphic and sedimentary. But they are _____ Adjective _____ made differently.

It's a rock. It's a ro-o-o-ock. Minerals, materials, _____ Adjective _____ mixed. Different colors _____ Adjective _____ and _____ Adjective _____. Sides with textures _____ Adjective _____ and _____ Adjective _____, oh. Ye-e-e-eah it's _____ Adjective _____ rock.

Its funny how minerals are in rocks. They create the elements. Such as silver, gold and mica all around they are alike(a sound). The composition, color, and texture.

It's _____ Adjective _____ rock. It's a ro-o-o-ock. Minerals, materials, all mixed. Different colors _____ Adjective _____ and _____ Adjective _____. Sides _____ Adjective _____ and _____ Adjective _____, oh. Ye-e-e-eah it's a rock.

Now lets talk about _____ Adjective _____ igneous. It all starts in and out of volcanoes. Intrusive means inside extrusive means outside, oh. Classification is such flow.

It's igneous, it's igneou-ou-ou-ous! _____ Adjective _____ or _____ Adjective _____ it's still the same. It can be gra-nite, basalt, or obsidian cooled by magma oh. But we still use it for building(background-and tools-)

Now this thing is kind of . Igneous changes slow. Over millions of years into sedimentary here oh, by _____ Adjective _____ different steps in one.

_____ Adjective _____ steps, _____ Adjective _____ ste-e-e-eps. weathering, erosion, cementation, deposition. It breaks up and layers on, sedimentary _____ Adjective _____ along. Oh, oh, its _____ Adjective _____ steps.

Sedimentary

is layered and cemented. Over thousands of years. There are three Adjective clastic, chemical, and organic. Oh, shale and limestone are Adjective too. His name is sed. His name is se-e-e-ed. It takes some time to erode. First erosion, then deposition, cementation the act of flattening oh, ye-e-e-eah his name is sed{(Background) And he's used in building }

The process is still the same. Just like iggy and sed. Only changes into something called Adjective oh.

Just by a Adjective morphing.

It's morphed, it's mor-or-or-or-orphed. Sed just changed into meta-a-amorphic. Only heat and pressure feels much better. Just trying to stay altogether. Oh-o-oh yeah sed is morphed.

Morph is kind of Adjective around. Foliated which is the Adjective and Adjective layers.

O-oh they can be both foliated or not. Just like marble and quartzite.

It's morph. It's mor-or-or-orph. That one that's Adjective changing. Created by the different types, heat and pressure that's what it's like. Just used in building like the rest.

Basically they're all the same. All changing into one another. All the steps into each one is just a Adjective decision oh, its called the rock cy-cycle.

The rock cycle. The rock cyc-le-le-le-le. Adjective million years and Adjective million steps.

Going around and around and around and around oh, there is no end coming down.

You might not know it but it is the rock cycle. Just never known it so Adjective. They all change into Adjective another, Adjective different types just all together. Oh oh, the rock cycleee.

It's a rock. It's a ro-o-o-ock. Minerals, materials, Adjective mixed. Different colors Adjective and Adjective.

Sides with _____ Adjective _____ rough and _____ Adjective _____, oh. Ye-e-e-eah it's a rock.
