How X-Rays Were Discovered

In late _______, a German ______, W. C. ________ was working with a cathode ray tube in his laboratory. He was working with tubes similar to our __________ light bulbs. He evacuated the tube of all air, filled it with a special gas, and passed a high __________ voltage through it. When he did this, the tube would produce a fluorescent glow. Roentgen shielded the tube with heavy black ________, and found that a green colored fluorescent light could be seen coming from a screen setting a few feet away from the tube. He realized that he had produced a previously unknown "________ light," or _________, that was being emitted from the tube; a ray that was capable of passing through the heavy paper covering the tube. Through additional ________, he also found that the new ray would pass through most substances casting ________ of solid objects on pieces of ________. He named the new ray _________ is used to indicated the _________ quantity.

In his discovery Roentgen found that the verb would pass through the <u>Noun - Plural</u> of humans leaving the <u>Noun - Plural</u> and metals visible. One of Roentgen's first experiments late in 1895 was a film of his wife Bertha's hand with a ring on her finger . The news of Roentgen's discovery spread quickly throughout the world. Scientists everywhere could duplicate his experiment because the cathode tube was very well known during this period. In early <u>Number</u>, <u>Noun - Plural</u> were being utilized <u>Adverb</u> in the United States for such things as bone <u>Noun - Plural</u> and <u>Noun</u> wounds.
