How Jumping Spiders Have Adapted to Their Environment

_____ Verb - Present ends in ING spiders, as you have probably already guessed, are a type of spider that jumps. This jumping _____ Noun is an adaptation to its environment _____ Pronoun because if a jumping spider were to be threatened by a _____ Noun, it would just simply jump away from its _____ Noun. This isn't always the case though. Some species of jumping spiders have learned to use ant nest as protection from other _____ Noun - Plural because most spiders will keep away from ants. The way they use the ant nest is that they will first find an _____ Noun near the nest (_____ Preposition enough that other spiders will keep _____ Adverb) and will, most of the time, find a _____ Adjective leafy area and _____ Verb a very, very thick den made out of its silk. Though as some of you may have asked, "But what if the ants find the _____ Noun - Plural den?" Well, the spiders have already thought of that. What they have on the front of their den is an _____ Noun with a _____ Adjective woven door out of their string. If the ants find the den and attack, the spider will pull this door closed to _____ Verb the ants from getting through. Of course, in some cases, the ants will break through and _____ Verb into the den to kill the _____ Noun. The only thing left for the spider to do is make an escape, that's where its second _____ Noun of defense comes into play. The spider has also built a back door to escape through if its _____ Adjective defense (the door) doesn't work. If all goes well the spider will run until the ants have receded back into their nest so it can _____ Verb back and repair its home. This, like many others, is an _____ Noun of a little tiny spider no bigger than your thumb nail to _____ Verb its environment.
