Alternative Energy

We use renewable and nonrenewable resources every day.

Earth's nonrenewable Noun Plural are resources that cannot be replaced by natural means as Adverb as they are consumed. These include fossil fuels such as coal, oil, and natural gas, and mineral resources such as uranium.

Earth's renewable Noun Plural are resources that can be replaced by natural means as Adverb as they are consumed. These include biomass, hydropower, wind, geothermal and solar.

Some areas have Adjective resources than others and each have their own advantage and disadvantage.

For example we can use oil for many different things like Verb Present ends in ING our cars or Verb Present ends in ING a flame for warmth. But once it runs out, it's gone! Or take wind for example. We can never run out of wind, but what if you live in a place that has no wind at all? Then you don't get that energy.

You will be Verb Present ends in ING about these Adjective energy sources and what are some advantages or disadvantages of Verb Present ends in ING them over the course of this week.
