# All Drains Lead to the Ocean

Local news report transcript.

---

---

News Anchor: Now to our next story. A young man is on the road to recovery after a close shave on a holiday retreat, which left him hospitalised. \_\_\_\_\_ Name you would give to your cat \_\_\_\_\_ Type of fish reports.

Reporter: At a suburban home on the outskirts of \_\_\_\_\_ Country \_\_\_\_\_ Male celebrity was just your average \_\_\_\_\_ Profession - eg doctor or farmer. With the holiday season approaching, he, like many others, had planned a trip away from his home town. Little did he know, a short holiday, would change his life forever.

Interviewee: I just thought..... \_\_\_\_\_ A curse word a first-grader would use ..... when they came back with the diagnosis ."

Reporter: \_\_\_\_\_ Female name \_\_\_\_\_ REPEAT male first name 's long-term partner of \_\_\_\_\_ Number months, tells reporters they had only been looking for a change of scene. After years without a break, \_\_\_\_\_ REPEAT

\_\_\_\_\_ male first name and \_\_\_\_\_ REPEAT female name decided to apply for work leave, and, together with their pet \_\_\_\_\_ Animal,

embark on a much-needed road trip. A few days in, however, things took a turn for the worst.

Interviewee: "We were ordering \_\_\_\_\_ Adjective you would use to describe a car \_\_\_\_\_ Country salads from \_\_\_\_\_ Restaurant chain \_\_\_\_\_, and that was when his symptoms first started. \_\_\_\_\_ Verb ending in ING \_\_\_\_\_, \_\_\_\_\_ Verb ending in ING \_\_\_\_\_ . He couldn't stop himself. Yeah, it was strange, but we thought, you know, maybe he would sleep it off. So that night we just went to bed and both tried to ignore it."

Reporter: The next day, they found their troubles, far from over.

Interviewee: "Morning came, and I looked over, and we couldn't hold a conversation, the \_\_\_\_\_ REPEAT verb ending in ING \_\_\_\_\_ was so bad. That was when we grabbed our \_\_\_\_\_ Plural objects \_\_\_\_\_ and rushed to hospital."

Reporter: It's hard to imagine just how difficult it must be to see a loved one in such a state. \_\_\_\_\_ REPEAT male first name \_\_\_\_\_ was also suffering from excessive \_\_\_\_\_ Verb ending in ING \_\_\_\_\_ fits, as well as intrusive thoughts about \_\_\_\_\_ Plural objects \_\_\_\_\_. Nurses struggled to diagnose these symptoms, but eventually, doctors declared he had contracted a non-lethal bacterial disease. When they asked whether he had been in contact with any wildlife the day before, the couple admitted they had been attacked by a swarm of \_\_\_\_\_ Plural cute animals \_\_\_\_\_ during their evening \_\_\_\_\_ Landscape - eg beach or mountain \_\_\_\_\_ walk. Doctors prescribed a course of antibiotics, and strongly advised him to return home immediately. The couple boarded a \_\_\_\_\_ Vehicle of transport \_\_\_\_\_, and arrived home the next day.

Interviewee: "They estimated the recovery would take two weeks."

Reporter: While the medication, at first, seemed to be working, that relief was short-lived. Just a few days later, it was clear something was still very wrong. The original symptoms began returning, and after just one week,

\_\_\_\_\_ REPEAT male first name \_\_\_\_\_ was exhibiting an extensive, new symptom: an affinity towards \_\_\_\_\_ Plural \_\_\_\_\_

\_\_\_\_\_ something you would buy on eBay \_\_\_\_\_. More worried than ever, they paid yet another visit to hospital.

Interviewee: "I showed them which antibiotics he was taking, and..... they were all sort of at a loss."

Reporter: Nurses assured the couple that the latest symptom was simply a side-effect of the medication. They

accused \_\_\_\_\_ REPEAT female name \_\_\_\_\_ for improper administration of the antibiotic, saying she had failed to

correctly administer the daily dose via the \_\_\_\_\_ Body part \_\_\_\_\_, which was why the symptoms had resurfaced. She

insisted this was impossible, and the team of doctors were forced to inspect the patient more closely. What they

found, was astounding. \_\_\_\_\_ REPEAT male first name \_\_\_\_\_ had contracted a well-documented pathogenic bacteria,

known as spp. \_\_\_\_\_ Two words that rhyme \_\_\_\_\_ -us. While cases of human infection tend to be rare, the bacteria are

ordinarily treatable with a regular course of antibiotics. However, on this occasion the bacteria proved unusually

resistant to antibiotics, despite looking identical to the classic bacteria in every way. Pharmaceutical teams

immediately began research into a new class of antibiotics, to treat \_\_\_\_\_ REPEAT male first name \_\_\_\_\_ 's troubling

condition.

Medical professional: "It's normal for bacteria to be slightly resistant to antibiotics. But what is not normal, is finding high levels of immunity in the wild. We used to only see that in densely-populated areas like hospitals and \_\_\_\_\_ Plural place you would go for fun - eg parks or nightclubs \_\_\_\_\_."

Reporter: Employees at the Centre for Infectious Research at the University of \_\_\_\_\_ Brand of beer \_\_\_\_\_, are already investigating this emerging issue of antimicrobial and antibiotic resistance. Head of department, Dr.

\_\_\_\_\_ Letter of the alphabet \_\_\_\_\_ Item of clothing \_\_\_\_\_, who holds the world record for most \_\_\_\_\_ Adjective \_\_\_\_\_

\_\_\_\_\_ Plural nouns \_\_\_\_\_ Past tense something you hate doing - eg vacuumed \_\_\_\_\_, claims we are now facing a

\_\_\_\_\_ Number \_\_\_\_\_ percent increase in the risk of infection by resistant diseases.

Medical professional: "No matter who or where you are in the world, this concerns us all. The antibiotics we feed to our livestock for the meat and dairy industries, and those which we consume ourselves, most of it ends up in the ocean. And what happened in the case of this gentleman is, these \_\_\_\_\_ REPEAT cute animals \_\_\_\_\_ were exposed to abnormally high levels of antibiotics, which caused them to be host to resistant bacterial strains. Of course, we know they spend most of their time hunting \_\_\_\_\_ Adjective you would use to describe an eel \_\_\_\_\_ \_\_\_\_\_ Plural marine organisms \_\_\_\_\_."

Reporter: Bacteria have the ability to exchange genes with their environment, and each other. Thus resistance, once encouraged by antibiotics, is a self-feeding loop. As more and more antibiotics are entering our oceans, resistance

can quickly emerge in places as remote as                     Somewhere you would teleport to in the event of an apocalypse                     . Even more  
                    Word you would use to describe a horror movie ending in ING                     , not only does this breed immunity in the wild, but it  
also increases the severity of any given disease.

Medical expert: "Times are changing. We are not living in the                     Historic event                     anymore. We need to take  
action, stop developing so many new antibiotics to combat the problem, and, instead, start using these medicines  
more responsibly. If medications like this were more strictly regulated, and patients more closely monitored, we  
wouldn't have this crisis on our                     Plural body parts                     ."

Reporter:                     REPEAT female name                     says she is just grateful to have solved this mystery, and glad that life will  
soon be returning to normal.

Interviewee: "They've made new antibiotics for him now. He's still in hospital at the moment, but it's been a  
week, and his symptoms have subsided a lot. So he should hopefully be back to his                     Adjective                     old self in  
no time."

Reporter: At this moment we are pleased to report that                     REPEAT male name                     is in a stable condition and is  
expected to make a full recovery.

News

Anchor: What you would say if you found out you got an A plus on your chemistry test

!!!! Thanks REPEAT

name of cat for that report. Our thoughts and prayers are with them for a speedy recovery.
