Case 1

Situation. A pharmacist verifies a medication order for vancomycin 1,500 mg for a admitted to
the intensive care unit from the emergency department. Verification included checking the order against
Adjective laboratory values, patient weight, and indication. The pharmacist failed to check the
emergency department medication record, where a dose of 1,500 mg of vancomycin had been administered. The
pharmacist, prepares, and dispenses the 1,500 mg vancomycin dose, with the
Proper Noun administering the dose. Several days later, the patient's serum creatinine begins to
Verb Base Form and a diagnosis of acute kidney Noun secondary to vancomycin is made with
hospital stay and interventions (eg, dialysis). This mistaken repeat of the vancomycin dose
resulting from the pharmacists' failure to check the emergency department medication administration record was
determined to be the root cause of the error. The pharmacist is a employee who is well
respected by Noun and is seen as a Noun Noun for ICU pharmacy care.
