# Blood and Vessels

It was just another day in the life of little red blood cell Randy. He was excited to go deliver some \_\_\_\_\_ Noun

to the body's \_\_\_\_\_ Noun. He squeezed through the narrow \_\_\_\_\_ Noun and entered the \_\_\_\_\_ Noun bed.

"Phew, pretty crowded in here!" Randy said, as he bumped into the other \_\_\_\_\_ Noun.

Up ahead there was a roadblock - a \_\_\_\_\_ Noun named Leo was stuck in the vessel and blocking the flow! "

Hey Leo! You're causing an infarction over here! The tissues aren't getting any oxygen!" Randy called out.

Leo said "Whoops sorry! I have leukocytosis and got a little crazy. Let me just diapedese out of your way." He

squeezed through the vessel wall, leaving the path clear.

"Whew, thanks Leo!" said Randy as he continued his oxygen delivery. All the cells were happy that catastrophe

had been averted. The end!
