Radioactive isotopes

 Changing the _______of ________in an atom does not change the overall charge of the atom.

 However, changeing the number of neutrons can affect the stability of the nucleus, in some cases causing the nucleus to decay, or break ________. When a nucleus breaks apart, it gives off radiation that can be ________. Isotopes that give off radiation are calleld radioactive ________.

 First name______. Isotopes that give off radiation are calleld radioactive ________.

 Carbon-14 is a radioactive _________that is found in all living things. Scientists know that the half-life, or the amount of time it takes for half of carbon-14 to decay, so they can calculate the age of an object by finding how much carbon-14 ____________the sample.
