STDs

Sexually transmitted diseases (also known as STDs and once called _____ Plural noun or _____ Plural noun) are _____ Adjective diseases that spread from person to person through _____ Adjective contact. STDs can affect _____ Type of person (women guys homeless people etc.) and _____ Type of person (women guys homeless people etc.) of all ages and backgrounds who are _____ Verb ending in ing it doesn't matter if they're _____ Adjective or _____ Adjective.

Unfortunately, STDs have become common among _____ Type of person (women guys homeless people etc.). Because _____ type of person (women guys homeless people etc.) are more at risk for getting some STDs, it's important to learn what you can do to protect yourself.

STDs are more than just an _____ Noun. They're a serious health problem. If untreated, some STDs can cause permanent damage, such as _____ Disease/condition (the inability to have a baby) and even _____ Disease/condition (in the case of HIV/AIDS).

How STDs Spread

One reason STDs spread is because people think they need to _____
to become infected. That's wrong. A person can get some STDs, like herpes or genital _____
through skin-to-skin contact with an infected _____
or _____. Another myth about STDs is that you can't get them if you have _____
or _____ sex. That's also wrong because the viruses or bacteria that cause STDs can enter the body through tiny cuts or tears in the _____
and _____ as well as the _____.

STDs also spread _____
because you can't tell whether someone has an infection. In fact, some people with STDs don't even know that they have them. These people are in danger of passing an infection on to their _____
partners without even realizing it.
