# Rats and Human Health Impacts

Rats have significant agricultural, natural resource, and human health impacts in the \_\_\_\_\_<sup>Location</sup> Islands.

Where they are used, current control techniques provide inconsistent levels of protection from \_\_\_\_\_<sup>Noun</sup> damage, and more effective methods for control are needed. Recognizing this need, \_\_\_\_\_<sup>Proper noun</sup> directed the establishment of a research project in cooperation with the Hawaii Agricultural Research Center. This project, by investigating a wider variety of methods to resolve \_\_\_\_\_<sup>Adjective</sup> \_\_\_\_\_<sup>Noun</sup> damage to agriculture, reforestation, structures & equipment, also fulfills one of the USDA-APHIS-Wildlife Services program research needs identified in a research needs assessment. Project staff will \_\_\_\_\_<sup>Verb</sup> with other state and federal \_\_\_\_\_<sup>Plural noun</sup> and private organizations to develop techniques to \_\_\_\_\_<sup>Verb</sup> \_\_\_\_\_<sup>Plural noun</sup> and other vertebrate species in natural areas. Research efforts covered by this project document will address, when appropriate, the pest control needs of the Hawaiian \_\_\_\_\_<sup>Adjective</sup> \_\_\_\_\_<sup>Noun</sup> and the conservation community.
